

Equity Partners Sought for 50 TPD Integrated Waste Plant (RDF, Compost, MRF), Jamnagar Gujarat (Rs 6 Crore Project)

We are setting up a 50 TPD (tonnes per day) integrated waste processing plant in Jamnagar, Gujarat. Along with Refuse Derived Fuel (RDF), the plant will also process compost and run a Material Recovery Facility (MRF) for recyclables. The total project cost is Rs 6 crore. The promoter is contributing Rs 1 crore, and we are seeking equity partner(s) for the remaining Rs 5 crore.

Why this project: Cities and industries in Gujarat generate large amounts of waste that mostly goes to landfill. This plant converts it into three value streams - RDF as an industrial fuel in place of coal, compost from organic waste, and recovered recyclables through the MRF - so the project earns revenue from waste while reducing landfill load. Demand is steady in an industrial state like Gujarat, and Jamnagar is well placed for waste supply.

We would like to hear from investors, family offices and project partners interested in waste-to-energy or waste-to-value projects. Please share your investment range and preferred structure, and we will send project details and discuss terms directly.

Location: Jamnagar, Gujarat.
